

DASNY Summary to Accompany the Capital Facilities Tracker:

Description from our grant application:

- b. Provide a short project description (8-10 sentences) **Port Chester Carver Center seeks funding from NICIP for the installation of a new Sika Sarnafil PVC roof system with all associated accessories and flashings. The installation of this roof system would be for the entirety of the Port Chester Carver Center four-section roof, located at 400 Westchester Avenue in Port Chester, New York. In addition to the new roof system, Carver Center seeks funding to repair the building facade. The roof replacement project is necessary to strengthen the structural integrity of the building, as well as weatherproof and safeguard Carver Center's facility. The project includes a preliminary roof study by Cowley Engineering, P.C., in addition to the actual replacement construction by Tri-State Commercial Roofing Corp. The roof study and subsequent plan will be used in conjunction with the determinations of Tri-State Commercial Roofing Corps' own examinations and estimations. The building façade was examined by Carry-On Home Improvements, and it was determined that the façade needs to be removed and replaced. The façade repair is necessary for both the safety of those that are inside and outside of the Carver Center, as well as for the structural integrity of the building, which is experiencing leakage, areas of sinkage and water damage.**
- c. What is the total estimated cost of your project? **\$512,640.00**
